Simple and Affordable
The new Excel 1™ vacuum pressing kit is a compact and very affordable system for vacuum bags up to 4’ x 4’ in size. The kit is a testament to simplicity and with its wide range of uses, you’ll find it a versatile and practical addition to your arsenal of tools. We have recently redesigned this system, updated a few parts, and made the assembly process easier with all new instructions.

This vacuum press is designed for woodworkers looking for a simple and affordable method to apply wood veneer and clamp wood projects for routing, sanding, carving, and more. The vacuum level is fully adjustable and can generate more than 1,785 lbs of pressure per square foot at sea level. At the heart of the system is a small but powerful 1.4 CFM vacuum pump designed to ensure many years of trouble-free operation. The system runs on standard household current (120v AC).

Every part of this system was designed with simplicity in mind. This makes it easy to assemble and incredibly durable. The assembly consists of only a few pieces and each uses standard NPT threads. There is no wiring involved in the assembly process and the whole system goes together very quickly.

I hope you find the assembly process to be very easy. This guide will help get your vacuum press put together as quick as possible. As always, feel free to contact me any time through my website at VeneerSupplies.com if you have any questions.

Assembly Time: 20 to 25 minutes
**Excel 1™ Parts List**

**1.4 CFM Heavy-Duty Vacuum Pump**

- Running Amps: 1.9
- Port size: 1/4 NPT
- Sound Rating: 63 dB
- Air Evacuation: 1 CFM
- Cylinder: Wetted Aluminum Alloy
- Design: Oil-less Rocking Piston
- Maximum Bag Pressure: 1,785 lbs/sqr ft
- Maximum Vacuum: 25.5" Hg at Sea Level

---

**Warning:** Brass products may contain chemicals known to the state of California to cause cancer or reproductive toxicity. Visit www.p65warnings.ca.gov for details.
PLEASE READ THIS SECTION CAREFULLY. IT CONTAINS A BINDING ARBITRATION CLAUSE THAT MAY SIGNIFICANTLY AFFECT YOUR LEGAL RIGHTS, INCLUDING YOUR RIGHT TO FILE A LAWSUIT IN COURT AND TO HAVE A JURY HEAR YOUR CLAIM(S).

The wording “We,” “Us” and “Our” shall herein include JWW Services Inc., JoeWoodworker.com, VeneerSupplies.com, and its representatives, owners, and employees. Your use of this product is governed by the policies, terms and conditions set forth below and such use of the content and principles indicates your acceptance of these terms and conditions. These terms and conditions shall supersede any subsequent terms or conditions. JWW Services Inc. reserves the right to make changes to these terms and conditions at any time.

We do not make representations or give warranties regarding the use of this article. All content is provided for use as is without warranty of any kind. User indemnifies and holds JWW Services Inc. harmless from any and all actions, civil or criminal, claims, liabilities, and losses including our attorney fees, arising out of the use of this instruction set. The contents of this document are to be considered informational only and that which is not from an expert. This document, provided by JWW Services Inc., is non-expert opinion only and offered without warranty. You are solely responsible for your access to, use of and/or reliance on any content. You agree to conduct any necessary, appropriate, prudent, or judicious investigation, inquiry, research, and due diligence with respect to the safe and appropriate use of its contents.

JWW Services Inc. shall not assume any responsibility for any incident, accident, or other harmful occurrence in regard to the information or use of the information contained in this document. No warranty or representation, either expressed or implied, is made with respect to the quality, accuracy, safety or fitness for any part of this document. In no event shall we be liable for direct, indirect, special, incidental, or consequential damages arising from any information contained herein. The user/builder/owner of the system shall assume all risk. The full or partial assembling of this system is an agreement that you will not hold us liable for any circumstances or costs that may arise from the use of these parts and this system.

It is also agreed that we do not provide any form of insurance of fitness of this device for any use: commercial or otherwise. You hereby agree to hold us harmless for any mishap, injury, or untoward occurrence. Users of this document and the equipment described herein do so at their own risk and assume complete responsibility for the use of that information and equipment by themselves or others. We are not responsible for any personal injuries to the user/builder/owner or others associated with its uses, or property damage resulting from building or operating the equipment described herein. Maintaining equipment and evaluating its suitability for a specific situation are the sole responsibilities of the user/builder/owner. You agree to use the information contained in this document at your own risk and to use good judgment during the use of the equipment described in this document at all times and to work safely within your own abilities.

We shall not be held responsible for typographical errors. The products contained in this kit are distributed, but not manufactured, by VeneerSupplies.com.

Resolution of Claims or Disputes
Any dispute or claim between you and Us arising in any way out of the use of this site or any product contained within this site will be resolved by BINDING ARBITRATION, rather than in a court. This obligation applies to both parties, regardless of the legal theory or cause of action involved (tort, product liability, misrepresentation, negligence, etc.). Both you and Us agree to waive the right to bring a lawsuit to be decided by judge or jury regarding any such claims or disputes, and instead agree to have such claims or disputes resolved by an arbitrator.

Governing Law
The arbitrator shall be agreed upon by the parties and the arbitration shall take place in Harford County, Maryland in accordance with Maryland law.

Procedure
If the parties cannot agree on a mutually acceptable arbitrator, the arbitration will be conducted through the American Arbitration Association (“AAA”) and in accordance with its rules. The AAA’s rules are available to view at https://www.adr.org. Both parties agree to equally share the administrative expense of the arbitration, unless the arbitrator finds that the claim was brought in bad faith and orders one party to pay the cost of the proceedings as part of the arbitration award. Both parties are responsible for paying the costs of their own counsel, experts, and witnesses. Judgment on the award rendered by the arbitrator may be entered in any court having jurisdiction thereof. Before commencing an arbitration under this Agreement, the aggrieved party will first present the claim or dispute to the opposing party by (certified mail, regular mail). Our notice address to submit claims or disputes is: JWW Services Inc., 217 E. Jarrettsville Rd., Suite 5, Forest Hill, MD 21050. If the claim or dispute is not resolved within 90 days, the aggrieved party can commence arbitration proceedings in accordance with this Agreement.

Class Action Waiver
All arbitrations conducted under this Agreement shall be conducted only on an individual (and not a class-wide) basis; and an arbitrator shall have no authority to award class-wide relief. Your use of this document indicates your acceptance that this Agreement specifically prohibits you from commencing arbitration proceedings as a representative of others or joining in any arbitration proceedings brought by any other person.

Severability
If any part or any provision of this Agreement shall be finally determined to be invalid or unenforceable under applicable law, that part shall be ineffective to the extent of such invalidity or unenforceability only, without in any way affecting the remaining parts of said provision or the remaining provisions of this Agreement.

Proposition 65 Warning (Assembly Bill 1953) To California and Other Applicable States
This warning is provided to comply with California’s Proposition 65 (Assembly Bill 1953) product labeling law and may apply to other states. Brass fittings and other products may contain chemicals known to the state of California to cause cancer, birth defects or other reproductive harm. Brass fittings may contain lead and are not for use with potable water. As with any product of this nature, we recommend washing your hands after contact with brass parts. We provide this warning based on our knowledge concerning the possible presence of one or more such chemicals, without attempting to evaluate the level of exposure. Visit www.p65warnings.ca.gov for details.
Before You Begin
There are a few things to know before you begin working on the Excel 1 kit. Please read each of the following topics carefully. Don't skip this section because it outlines key concepts that must be understood before the system can be assembled.

Time Estimates for Assembly
Assembly time will vary, but it shouldn't take more 25 minutes. If these instructions appear excessively long, it is only because of the large number of pictures I've included throughout this document. The assembly process does not take as long as it appears in these instructions.

Required Tools and Abilities
The Excel 1 system is offered as a kit which requires assembly. A small amount of dexterity and physical strength will be needed to adequately assemble and tighten each fitting. The following tools are required to assemble this kit... Wrenches: 9/16", 5/8", 11/16", 3/4", 18mm, or two adjustable crescent wrenches

A Note About Thread Sealing Tape
All metal-to-metal connections must have sealing tape applied to the male threads. Start the process of applying thread sealing tape by holding the fitting in your right hand. Then apply the end of the tape to the threaded portion of the fitting and rotate the fitting clockwise. The fitting should be rotated in the same direction as if it were being inserted into another fitting. No more than three layers of tape should be applied to the fitting.

Tightening Instructions
Throughout these pages, you will find three terms used to describe the amount of effort that must be applied when assembling any two parts.

"Hand-Tighten" - Tighten by hand as far as possible. Do not use tools to further tighten.
"Firmly" - Use tools as required to tighten the fittings with firm but not aggressive force.
"Aggressively" - Use tools to tighten the fittings using as much force as reasonably possible.

Vacuum Gauge Handling
The vacuum gauge is a sensitive measuring instrument which contains a fragile "sensing" spring inside. Handle the gauge with care; do not drop it or allow a tool to collide with the gauge.

Brass Parts Warning
Proposition 65 Warning (Assembly Bill 1953) To California and Applicable States:
Brass fittings and other products may contain chemicals known to the state of California to cause cancer, birth defects or other reproductive toxicity. Brass fittings may contain lead and are not for use with potable water.

As with any product of this nature, you should wash your hands after contact with brass parts. We provide this warning based on our knowledge concerning the possible presence of one or more such chemicals, without attempting to evaluate the level of exposure.

Not Suitable for Use Near Flammable or Combustible Materials
The individual components of this kit and the completed assembly of these components should not be considered suitable for use in areas where flammable or combustible gases or dusts are present.
Assembly Instructions

Before you begin, please keep in mind that there is no need to apply excessive force when tightening any of the fittings. Since this is a continuous-run vacuum press, small leaks will not affect the vacuum level created by the vacuum pump.

1. Thread sealing tape will be applied only where there will be a metal-to-metal connection. The tape is not shown in the assembly pictures for the sake of clarity. Apply sealing tape to the threads on the following items.
   - Brass Elbow
   - Vacuum Valve
   - Vacuum Bleeder
   - Vacuum Gauge
   - Brass Hex Pipes (leave one side of one of these fittings without thread sealing tape)
   - Brass Barb Fittings

2. Remove and discard the nut from each of the four rubber "feet" included in the vacuum pump box. Leave the small lock washer in place on each foot. Attach the four rubber feet to the bottom of the vacuum pump.

3. Attach one of the brass hex pipe fittings to the intake port (marked with a “C”) on the vacuum pump. Hand-tight is fine for this step.

4. Attach the brass cross to the brass hex pipe fitting. Using an 11/16" wrench, apply enough force so that the cross and pipe fitting from the previous step are firmly tightened. Then stop tightening when the cross is slightly tilted as shown in the following picture.
5. Attach the vacuum gauge to the top port of the brass cross fitting using a 9/16” wrench. Do not apply force to the gauge housing and use care to avoid hitting the gauge with any tools as this will damage the sensing element inside. Firmly tighten the gauge and then stop applying turning force when the gauge is facing forward as shown in the following picture.

*If the gauge needle is not at zero, use a pair of scissors to cut off the tip of the rubber stopper on the top of the vacuum gauge.*

6. Attach the vacuum valve to the port on the right side of the brass cross fitting using an 18mm wrench. You can use a 11/16” wrench on the body of the brass cross to prevent it from turning as you firmly tighten the vacuum valve. When finished, the vacuum valve should be aligned with the brass cross as shown in the picture below.
7. Firmly attach the vacuum bleeder fitting to the vacuum valve using 9/16” and 18mm wrenches.  

The vacuum valve and bleeder fitting allow the user to quickly and easily adjust the amount of vacuum being applied to the project. The fitting which we call a "bleeder" can be used for many purposes. For this kit, the bleeder simply allows filtered air back into the system to lower the vacuum level on the project.

8. Attach the brass elbow fitting to the lower port on the brass cross fitting and use a 3/4” wrench to firmly (not aggressively) tighten it. Stop applying turning force when the fitting is aligned as shown in the picture below.

9. Firmly attach the remaining brass hex pipe (using the side that has thread sealing tape) to the elbow fitting using a 9/16” wrench. Use a 3/4” wrench to hold the elbow fitting in place as the hex pipe is tightened. The other end of this fitting should not have thread sealing tape applied.
10. Unscrew the clear filter bowl from the black plastic filter head. Attach the filter head to the brass hex pipe. Be sure the directional arrow stamped on the side of the filter head is pointing in the direction of vacuum flow (toward the brass elbow).

Attach the filter head as tight as possible by hand. If you consider yourself an exceptionally strong person, then you probably have it tight enough. Otherwise, carefully use pliers to tighten the filter head until it is seated on the brass pipe as shown below.

Avoid over-tightening the filter head. The plastic is soft and it will easily seal against the threads on the brass fitting without excessive force.

When finished, turn the vacuum valve handle to the horizontal (open) position.
11. Use a 3/4” wrench on the body of the brass elbow and rotate this fitting to the right until the filter head is parallel to the vacuum valve and bleeder fitting.

*Tip: To get a wrench on the back of the brass elbow, you might find it easier to first tilt the brass cross and gauge further back against the pump motor. Do this using an 11/16” wrench on the body of the cross. Don't apply force to the gauge housing. When finished, use the 11/16” wrench to rotate the cross back to its original position.*

![Image of brass elbow and vacuum valve]

12. The filter bowl can now be re-attached to the filter head. Hand-tight is adequate.

13. Turn the vacuum valve handle to the vertical (closed) position.

14. If necessary, turn the filter head to get the filter bowl to sit vertically. With a bit of effort, you can also tilt the brass cross forward or backward to allow the filter to sit correctly as shown in the picture below.

15. Make sure there is no thread sealing tape applied to the lock-on plug fitting. Then attach it to the vacuum filter with a 9/16" wrench and slowly tighten it until the hex part of the fitting is approximately 2mm from the plastic filter head. This measurement is important as it prevents the plastic threads on the vacuum filter head from splitting.

16. Now firmly attach a 1/8" NPT brass barb fitting to both of the lock-on connectors using a 5/8" and 9/16" wrench.

17. Attach each of the above assemblies to the vacuum tube. A high-grade braided tube is included with the Excel kit so the barb fittings should slide in without much effort, but the tubing can be softened in hot water to make this process easier.

18. You can now attach the vacuum tube to the system by pulling back the sleeve on the lock-on connector and pushing it onto the fitting on the vacuum filter. Release the sleeve while gently pushing the vacuum tube toward to filter to snap the lock-on connector into position.
Your Excel 1™ Vacuum Pressing System Is Now Complete!
I've written a short but helpful article that explains what else you will need to use your vacuum press. The article also includes a step by step guide to using your system for vacuum pressing a veneered panel. Check it out here…

How to Use the Excel 1 Vacuum Press System
Apply the bag closure to the vacuum bag after the project is prepared and placed inside. Pull back the sleeve on the lock-on connector and slide it onto the brass stem* on the vacuum bag. Release the sleeve while gently pushing downward to snap the lock-on connector into position.

Plug in the Excel 1 vacuum press and close the vacuum valve by turning the handle to the vertical position. The gauge will show how much vacuum is being applied to the bag. The ideal vacuum level for most veneering projects is 21" of Hg. Observe the vacuum gauge as the indicator needle moves toward this ideal vacuum level. When the needle passes the 21" of Hg mark on the gauge, slowly open the vacuum valve. Doing so will allow a small amount of air to vent back into the system and the gauge needle will move backward. Adjust the position of the vacuum valve handle until the gauge needle settles at the 21" mark. No further adjustment should be needed during the pressing time for the project.

* The vacuum bags offered at VeneerSupplies.com include a special brass stem that mates with the lock-on connector included with this vacuum press kit.

Warnings
1. Do not allow the vacuum press system to run unattended.

2. The vacuum gauge is a sensitive instrument and will be rendered inaccurate if dropped or struck with a hard object.

3. Not suitable for use near flammable or combustible materials!
   The individual components of this kit and the completed assembly of these components should not be considered suitable for use in areas where flammable or combustible gases or dusts are present.

4. The vacuum pump may be hot during and after use. Exercise care when handling the vacuum press system.

5. Keep in mind that this system is designed to run continuously while the adhesive is setting up. The vacuum pump will not restart if power is removed from the system and there is any vacuum shown on the gauge. If you need to turn the system off while pressing a project, then you must temporarily disconnect the lock-on connector from the vacuum bag before turning on the pump again. When the pump is running, re-attach the lock on connector to the bag. Failure to do this will cause the pump to stall and over-heat which can result in permanent damage to the vacuum pump.

Pressing Time
The adhesive used on your project will determine how long the panel needs to be pressed in the bag. Always follow the instructions on the adhesive bottle for clamping time. Excess clamping time for some adhesives can be problematic so avoid pressing the project for too long.
Optional Excel System with Podz™ Vacuum Clamping Jigs

Set Up
If you ordered the Excel system with the optional Podz™ clamping kit, assemble the jigs using the instructions included with that kit.

Begin preparing the vacuum press system and the Podz jigs for use by attaching the tube adapter from the lead Podz clamping jig to the lock-on connector from the Excel vacuum system.

Attach the power cord from the vacuum pump to the end of the power cord on the electric foot pedal included with the Podz clamping kit.

Plug the foot pedal power cord into a standard 120v AC wall socket.

Using the Excel System with Podz™ Vacuum Clamping Jigs
Set the vacuum valve about half way between the fully open and fully closed position. Then turn the system on by depressing the front edge of the foot pedal (the area closest to the power cord). Now place your work piece onto the Podz jigs. You should feel the vacuum pull it down.

You may wish to adjust the vacuum valve if the clamping piece is very porous and causes inadequate clamping pressure. Adjust the vacuum valve handle as needed to create an ideal balance of vacuum clamping force and release time.

Slight adjustments toward closing the vacuum valve increase the clamping pressure and decrease the speed at which the project releases from the clamping jigs. Slight adjustments toward opening the vacuum valve decrease the clamping pressure but increase the rate of release when the system is turned off.

Press the back edge of the foot pedal to turn off the vacuum pump and release your project. You may hear the flow of air from the bleeder fitting as the vacuum from the jigs is unloaded.
